Daniel Nordgren

I live to develop and strive to see the same progress in my surroundings. Therefore, I am happy to engage in supporting and helping others grow. It motivates me to see improvements within my "team," and I am passionate about developing groups that can reach their full potential.

Skills

Project management	Development of products and services within software and hardware as well as the creation and implementation of IT systems.
Change management	Implementation of new ways of working and cultures, facilitation of workshops, process improvements, agile leadership/coaching.
Leadership	Manager with personnel responsibility and head of functions.
System Development	Development/responsibility for objects/modules in larger systems.

Industries

Telecommunications, Mixed Reality, Game Development, Software Development

Summary

Project management, (Ericsson Private 5G, Envision, Virtual Workspace, Dreihänder)

I have experience leading projects at various levels—within teams, between teams, across multiple teams, and across continents. My strength lies in bringing people together, finding solutions to problems, and identifying the best path forward. This makes me a leader who builds trust and provides strong support to those I work with.

Change Management, (Ericsson Private 5G, Envision, Dreihänder)

I have worked extensively in change management to drive agile transformations. Through in-depth release retrospectives, I have achieved concrete changes, such as teams taking greater responsibility for automating their tests, improving communication flows, and establishing a "fail-fast" mentality in virtual teams with limited time to develop new features.

Leadership, (Ericsson Private 5G)

As a manager, I have been responsible for both the product catalog and personnel. I have actively coached and fostered the culture I aimed for, ensuring that like-minded employees continued to drive this mindset forward.

System Development, (Ericsson Private 5G, Envision, Virtual workspace)

Delivered code for a team responsible for two standalone components. One component measured product quality by evaluating latency in a delivered network, while the other managed the product's configuration for the North American market.

Tools:

Unity
Putty
Visual studio/Visual studio Code
GoLand
ASP.NET CORE
Atlassian
Figma
Github/Gitlab
Google Cloud Platform
Linux
Slack
Microsoft 365
Programming languages:
Python
Golang
C++
C#
Bash
Javascript
Razor
MySQL

Processes and Standards:

DISC Model – Used to identify team members' personalities and understand how best to lead and support them.

Johari Window – Used to improve communication with the team.

SBI Model – Used to foster a stronger feedback culture within the team.

Lencioni's Five Dysfunctions of a Team – Used to identify areas for team development and efficiency.

Tuckman's Stages Model – Used to clarify how the team can progress together.

CUDSA – Conflict Management – Used for more effective communication.

John Kotter – 8-Step Process for Leading Change – Used to optimize organizational change efforts.

RACI – Used to identify team weaknesses, proactively address them, and ensure necessary competencies were in place.

Agile, Scrum, XP Programming

Project Descriptions

IT-Related:

ERICSSON AB EP5G - Team Lead / Engineering Manager (November 2022 – February 2025)

- Responsible for a product spanning multiple teams in a cross-functional organization. Managed components handling backend functionalities and various customer-specific features. Maintained strong collaboration with customers and internal departments, ensuring timely deliveries.

- Managed a testing team in India and another in North America, focusing on continuous improvement and security. Led the establishment of their agile framework, Scrum, and "fail-fast" mentality. Collaborated with a development team in Ireland to ensure software and hardware compatibility across the product. Maintained close cooperation with the in-house radio hardware team to ensure market requirements and hardware limitations were met. Delivered test results within agreed timelines and continuously expanded the testing scope.

- Also responsible for personnel management, including salary setting and employee coaching. Negotiated between stakeholders to ensure goal alignment and achievable timelines.

ERICSSON AB EP5G - Feature Lead / Operational Product Owner / Scrum Master (March 2022 – November 2022)

- Worked closely with stakeholders to align development with market needs and direction. Led product ownership and negotiations, prioritized features with Business Analysts, and ensured roadmaps were created and followed. Held regular stakeholder follow-ups to maintain project momentum.

- As a Scrum Master, coached the team in professional Scrum culture and promoted Scrum principles beyond the team. Several team members became Scrum certified and upheld these values.

- Completed Ericsson's internal Leadership Core Curriculum course and was later invited to train others, for which I took a short teaching course and led a training group in late 2022.

ERICSSON AB EP5G – Developer / Scrum Master (September 2021 – March 2022)

- Initially joined without a specific role, allowing me to explore different areas. Began working closely with hardware and took responsibility for managing the development environment. Later joined a newly formed team responsible for two external backend modules. Developed an algorithm that dynamically distributed radio frequencies while optimizing latency.

ERICSSON Garage – Developer / Scrum Master (January 2020 – December 2020)

Worked on two projects:

- **Envision** – Developed an AR platform for communication between devices, allowing city planners to visualize radio masts in a real-world environment. Designed system architecture and implemented AR solutions similar to IKEA's AR furniture placement.

- **Virtual Workspace** – Investigated whether a standard Android camera could track dynamic positions and relate them to specific keyboard keys in an AR environment. Led risk management efforts for new technologies, such as AR Snap and Vuforia.

Dreihänder – Product Manager (Summer 2020 – Present)

- Took responsibility for product management and agile transformation at a startup game development company. Focused on building a solid agile foundation, implementing a "fail-fast" mentality, and overseeing financing and system architecture.

Non-IT Related:

Frösunda Omsorg AB – Personal Assistant (2012)

- Supported individuals in daily functions, created work schedules, trained new assistants, and conducted courses in ergonomics and caregiving.

Hiphoppet – Organizer (2012 - 2016)

- Founded a music club in Gothenburg, handling artist bookings, staffing, and sponsorships. Gained valuable experience in personnel management and event organization.

Sinkaberg Hanssen AS – Fish Cleaner / Hygiene Technician (2009)

- Worked in a Norwegian salmon processing plant, later promoted to night shift hygiene technician, responsible for sanitization to minimize the risk of listeria bacteria.

Education

2018 - 2021 B.Sc. Computer Sciences

2021 Certified Scrum Master	ProAgile
2022 Leadership Core Curriculum	Ericsson
